# KITCHEN MOTH TRAP

The **Kitchen Moth Trap** attracts and traps flour moths (Indian meal moths, Mediterranean flour moths, Almond moths and Raisin moths). These moths are found around dried foods such as rice, grains, cereals, flour, wheat, crackers and nuts. They are also found in pet foods, bird seed or other dried food or feed. These traps contain a special lure (pheromone) that attracts male moths who are then caught in the trap and are therefore unavailable for breeding.

## DIRECTIONS FOR USE:

1. Open foil pouch.
2. Place one lure inside Trap on glue.
3. Place trap where moths have been seen.
4. Replace trap when full or after 3 months.

**NOTE:** Avoid touching adhesive area inside of trap.
