

DEXOL STUMP REMOVER

Dexol Stump Remover provides a safe, easy method for removal of any size stump. It is non-explosive and harmless to surrounding vegetation. When used as directed, **Dexol Stump Remover** stimulates decomposition of the stump. This allows the stump to be easily removed or prepares stump for easy burning.

DIRECTIONS FOR USE

For removal of stumps up to 12" in diameter, drill a 1" hole in center of stump approx. 10" to 12" deep. Drill an additional 1" hole into the side of the stump approximately 3" below the top of the stump. This second hole should be slanted to connect (or nearly so) with the bottom of the center hole. Drill several sets of such holes for stumps larger than 12" wide.

Pour approx. 1/4 lb. of **Dexol Stump Remover** into each hole and dissolve with hot water. Continue to add water to holes for a period of four to six weeks. As the material is absorbed, the stump will decay more rapidly. To remove stump, dig down below crown of the stump and remove.

If burning is allowed, after waiting the four to six weeks for the **Dexol Stump Remover** to be absorbed, fill the holes with kerosene. After the kerosene is completely absorbed by the stump (four to five weeks depending on the size of the stump), light a fire on top of the stump using wood kindling, charcoal briquettes or other suitable material. The stump will then burn with a red glow until the stump and roots have turned to ash.

CAUTION

Keep out of reach of children. This product may cause irritation of eyes and skin. Avoid breathing dust. In case of contact, wash thoroughly with soap and water. If swallowed, call a physician. This product contains potassium nitrate.

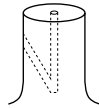

NOTICE: Buyer assumes all risks of use, storage or handling of this product not in strict accordance with directions given herewith.
